HORSES NEED SPECIAL CARE DURING COLD WEATHER

The horse as a farm animal is a disappearing breed—but many Virginians still keep horses for riding, for pets, and as show animals.

He ce the advice from Dr. S. L. Kalbon, veterinarian at Virginia Polytechnic institute, that horses need some special pampering in the winter months.

Plenty of exercise, fresh water, and proper ration s are tops on the list for continuous care. A word of caution—don't let a horse cool too rapidly after strenuous exercise in cold weather or it may develope stiff muscles, catch cold, or even develop pneumonia. Always put a blanket or some cover on the horse if it is perspiring, especially if it is to be put in a cold or drafty place.

Special problems that need attention in the winter include parasite control and checks of the horse's feet and teeth. One of the most common parasites of horses, bots, can be treated effectively only in the winter. Carbon disulfide is an effective drug to control bots, but it is dangerous if not handeled properly. Dr. Kalbon suggests a treatment in February. If a local veterinarian suggests two doses, give one in the winter and another two months later.

When the veterinarian comes to give the bot treatment, it may be convenient to also have him check on teeth and feet.

INSECT SUMMARY AT VPI

Virginia farmers continued their age old battle against insect enemies last year with the usual number of successes and failures, reports Wallace A. Tarpley, entomologist at Virginia Polytechnic Institute.

Corn earworms caused statewide damage to corn, but infestations on soybeans in eastern Virginia were considrably less than in the two previous years. Late planting of corn and above average rainfall in the summer proably accounted for the lessend infestations, says Tarpley.

Corn also suffered less from the European corn borer than in the two years preceding. Heavy statewide infestations of alfalfa weevil larvae were observed on untreated alfalfa. Adults failed to migrate from alfalfa fields in many parts of the state and inflicted heavy damage in late June and early July.

This was an unusual occurance and is being investigated. Adult alfalfa weevils migrated to alfalfa fields in September and later, and the peak of egg laying was in early December.

Armyworms caused no wideapread outbreaks this year, says Tarpley. The clover nonophila, a relatively new pest, damaged nearly seedid alfalfa in Franklin and Culpeper counties.

The pea aphid was prevalent during the spring and summer, but caused damage only occasionally to alfalfa. In most cases, their numbers were drastically cut by disease and predation.

Peanut crops in some areas of eastern Virginia were almost totally destroyed by the southern corn rootworm where controls failed, or were not applied correctly.

Sap beetles were often reported as infesting corn, particularly sweet corn, in many localities in 1961.

KNOW THE WEATHER

By E. H. Sims

What happens when a cold front and a warm front meet head-on? What are the characteristics of the stationary front produced?

A cold front, running into a warm front with about equal momentum, stagnates and marks time. The warm front also comes to a halt and the result, where the two air masses have met, is a stationary front.

A stationary front almost always produces prolonged rain and cloud and erratic wind currents. Sometimes the rain lasts for many days, until one of the systems breaks through the other or another strong front moves in.

If planning to fly, the weather map symbol of a stationary front should be highly discouraging, for landing and navigating in such an area is hazardous and often dangerous. Weather cannot be accurately predicted and visibility is usually bad.

Stationary fronts occur during the change of seasons. This spell of bad weather was called by old-timers the "turn of the seasons".

Colored Dots

A large crowd attended Preaching Services at the St. Luke Baptist Church Sunday.

Mr. and Mrs. Chas. H. Canada and Mrs. G. T. Walker were callers Sunday in the home of Mrs. Euphon J. Williamson, who is improving slightly after illness of three weeks.

Mrs. Carrie V. Elliott is doing reasonably well after returning to her home here.

Mrs. G. T. Walker (who is residing in the home of Mr. and Mrs. W. R. Marshall and caring for Mrs. Marshall, her sister) is a lover of house plants. In her collection of plants she has grown a tomato vine that has 3 normal size ripe tomatoes on it and strawberries blooming. Quite a beautiful sight to see.

We search for traffic solutions—but nothing is yet known than to have a police car right behind you.—The Wichita Eagle.

"Well", said the driver to his family as they all piled out of the car, "now that we've found a parking place at last, does anyone remember why we're here?"

Play safe—Drive carefully.

CATHERINE M. CRAWLEY

Miss Catherine Marshall Crawley entered into rest at the Medical College Hospital of Virginia January 13 1962, of 8712 Chippenham Road, Richmond, Va.

She is survived by her parents, Mr. and Mrs. Ray ' Crawley; two sisters, Mary Lynn and Anne Braden Crawley; and her grandmothers, Mrs. Virginia S. Braden and Mrs. Lindsey Crawley. Interment was in Westhampton Memorial Park.

RED OAK

CHRISTIAN BUILDERS ME

The Christian Builders of Oak Baptist Church will meet the home of Mrs. Hubert Wi son Tuesday, February 13, at 7 All members are expected to tend.

Reporters: Nancy B Betty Lo

Subscription rate: $2.00 a payable in advance.

Local Jaycees plan on Pan Day here Feb. 3.
